IMPORTANT SAFETY INSTRUCTIONS
READ AND FOLLOW ALL INSTRUCTIONS
SAVE THESE INSTRUCTIONS
IMPORTANT SAFETY PRECAUTIONS

**DANGER**

**SERIOUS BODILY INJURY OR DEATH CAN RESULT IF THIS PUMP AND SAND FILTER IS NOT INSTALLED AND USED CORRECTLY.**

INSTALLERS, POOL OPERATORS AND POOL OWNERS MUST READ THESE WARNINGS AND ALL INSTRUCTIONS BEFORE USING THIS PUMP AND SAND FILTER.

This pump ss intended for use in swimming pool applications.

Most states and local codes regulate the construction, installation, and operation of public pools and spas, and the construction of residential pools and spas. It is important to comply with these codes, many of which directly regulate the installation and use of this product. Consult your local building and health codes for more information.

**IMPORTANT NOTICE - Attention Installer:** This Installation and User's Guide ("Guide") contains important information about the installation, operation and safe use of this pump. This Guide should be given to the owner and/or operator of this equipment.

Before installing this product, read and follow all warning notices and instructions in this Guide. Failure to follow warnings and instructions can result in severe injury, death, or property damage. Call (800) 831-7133 for additional free copies of these instructions. Please refer to www.pentair.com for more information related to these products.

---

**SUCTION ENTRAPMENT HAZARD**

Pool and spa pumps move large volumes of water, which can pose extreme danger if a person's hair comes in close proximity to a drain that is not the proper size for the pump or pumps.

**Hair Entanglement** – When the hair tangles or knots in the drain cover, trapping the swimmer underwater. This hazard is present when the flow rating of the cover is too small for the pump or pumps.

**Limb Entrapment** – When a limb is sucked or inserted into an opening resulting in a mechanical bind or swelling. This hazard is present when a drain cover is missing, broken, loose, cracked or not properly secured.

**Body Entrapment** – When a portion of the body is held against the drain cover trapping the swimmer underwater. This hazard is present when the drain cover is missing, broken or the cover flow rating is not high enough for the pump or pumps.

**Evisceration/Disembowelment** – When a person sits on an open pool (particularly a child wading pool) or spa outlet and suction is applied directly to the intestines, causing severe intestinal damage. This hazard is present when the drain cover is missing, loose, cracked, or not properly secured.

**Mechanical Entrapment** – When jewelry, swimsuit, hair decorations, finger, toe or knuckle is caught in an opening of an outlet or drain cover. This hazard is present when the drain cover is missing, broken, loose, cracked, or not properly secured.

---

**DANGER**

**RISK OF ELECTRICAL SHOCK OR ELECTROCUTION:**

PUMPS REQUIRE HIGH VOLTAGE WHICH CAN SHOCK, BURN, OR CAUSE DEATH. BEFORE WORKING ON PUMP!

Always disconnect power to the pool pump at the circuit breaker from the pump before servicing the pump. Failure to do so could result in death or serious injury to service person, pool users or others due to electric shock.
Water temperature in excess of 100° F (37.7° C) may be hazardous to your health. Prolonged immersion in hot water may induce hyperthermia. Hyperthermia occurs when the internal temperature of the body reaches a level several degrees above normal body temperature of 98.6° F (37° C). Effects of hyperthermia include: (1) Unawareness of impending danger. (2) Failure to perceive heat. (3) Failure to recognize the need to leave the spa. (4) Physical inability to exit the spa. (5) Fetal damage in pregnant women. (6) Unconsciousness resulting in danger of drowning. The use of alcohol, drugs, or medication can greatly increase the risk of fatal hyperthermia in hot tubs and spas.

When setting up pool water turnovers or flow rates the operator must consider local codes governing turnover as well as disinfectant feed ratios.

DO NOT increase pump size; this may increase the flow rate through the system and exceed the maximum flow rate stated on the drain cover.

Do not permit children to operate this product.

If this pump is intended for use other than single-family dwellings, a clearly labeled emergency switch shall be provided as part of the installation. The switch shall be readily accessible to the occupants and shall be installed at least 5 feet (1.52 m) away, adjacent to, and within sight of, the unit.

When setting up pool water turnovers or flow rates the operator must consider local codes governing turnover as well as disinfectant feed ratios.

Before servicing the system, switch the main power OFF and remove the communication cable from the pump.

Install the pump a minimum of five (5) feet from the inside wall of the pool and spa. Canadian installations require a minimum of three (3) meters from pool water.

A No. 8 AWG (No. 6 AWG in Canada) or larger conductor must be wired to the motor bonding lug.

This pump is for use with permanently installed pools and may also be used with hot tubs and spas if so marked. Do not use with storable pools. A permanently installed pool is constructed in or on the ground or in a building such that it cannot be readily disassembled for storage. A storable pool is constructed so that it may be readily disassembled for storage and reassembled to its original integrity and has a maximum dimension of 18 feet (5.49m) and a maximum wall height of 42 inches (1.07m).

For hot tubs and spa pools, do not install within an outer enclosure or beneath the skirt of a hot tub or spa unless so marked.

The IntelliPro pump is capable of generating systems pressures up to 50 psi. Installers must ensure that all system components are rated to withstand at least 50 psi. Over pressurizing the system can result in catastrophic component failure or property damage.

Never exceed the maximum stated pump flow rating.

Only use a pumping system rated for the corresponding flow. FAILURE TO DO SO CAN RESULT IN HAIR OR BODY ENTRAPMENT WHICH CAN CAUSE SERIOUS PERSONAL INJURY OR DEATH. If in doubt about the rating of your system, consult a qualified pool service professional.

Pumps are not a substitute for properly installed and secured pool drain covers. An ANSI/ASME A112.19.8 approved anti-entrapment drain cover must be used for each drain. Pools and spas should utilize a minimum of two drains per pump. Regularly inspect all covers for cracks, damage and advanced weathering. If a cover becomes loose, cracked, damaged, broken or is missing, close the pool or spa immediately, shut off the pump, post a notice and keep the pool or spa closed until an appropriate VGB 2008 certified cover is properly installed. Covers deteriorate over time due to exposure to sunlight and pool chemicals. This cover must be replaced within seven (7) years from installation (or earlier if the cover becomes damaged in any way).
IMPORTANT SAFETY PRECAUTIONS (continued)

**Entrapment Avoidance Notice:**

The suction outlet connected to a swimming pool or spa pump can pull a high vacuum if it is blocked. Therefore, if only one suction outlet smaller than 18" x 23" is used, anyone blocking the suction outlet with their body can be trapped and held against the suction outlet. Disembowelment or drowning can result. Therefore, if small suction outlets are used with this pump, to prevent this entrapment and possible death, install at least two suction outlets in the body of water. Separate these suction outlets as described in the International Residential Code (IRC), the International Business Code (IBC), the Consumer Products Safety Council (CPSC) Guidelines for Entrapment Hazards: Making Pools and Spas Safer or ANSI/IAF-7 Standard for Suction Entrapment Avoidance in Swimming Pools, Wading Pools, Spas, Hot Tubs and Catch Basins. If suction outlets are not used, additional entrapment avoidance measures as described in the CPSC Guidelines or ANSI/IAF-7 should be employed.

The covers used on suction outlets should be approved and listed as conforming to the currently published edition of ANSI/ASME A112.19.8 Standard covering Suction Fittings for Use in Swimming Pools, Wading Pools, Spas and Hot Tubs. These covers should be inspected regularly and replaced if cracked, broken or older than the design lifetime indicated on them by the manufacturer. The maximum possible flow rate of this pump should be less than or equal to the maximum approved flow rate indicated on the suction outlet cover by the manufacturer. THE USE OF UNAPPROVED COVERS OR ALLOWING USE OF THE POOL OR SPA WHEN COVERS ARE CRACKED OR BROKEN CAN RESULT IN HAIR ENTANGLEMENT WHICH CAN RESULT IN DEATH.

The Virginia Graeme Baker Pool and Spa Safety Act imposes certain new requirements on owners and operators of swimming pools and spas.

Pools or spas constructed on or after December 20, 2008, shall utilize:

(A) No submerged suction outlets, a gravity drainage system with ASME/ANSI cover(s), one or more unblockable outlets; or  
(B) A multiple main drain system without isolation capability with suction outlet covers that meet ASME/ANSI A112.19.8 Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs and either:

(ii) A properly designed and tested suction-limiting vent system or

(iii) An automatic pump shut-off system.

Pools and spas construction prior to December 20, 2008, with a single submerged suction outlet shall use a suction outlet cover that meets ASME/ANSI A112.19.8 and either:

(A) A multiple main drain system without isolation capability, or  
(B) A safety vacuum release system (SVRS) meeting ASME/ANSI A112.19.17 and/or ASTM F2387, or  
(C) A properly designed and tested suction-limiting vent system, or  
(D) An automatic pump shut-off system, or  
(E) Disabled submerged outlets, or  
(F) Suction outlets shall be reconfigured into return inlets.

For information about the Virginia Graeme Baker Pool and Spa Safety Act, contact the Consumer Product Safety Commission at (301) 504-7908 or visit www.cpsc.gov.

NOTE: Always turn off all power to the pool pump before installing the cover or working on any suction outlet.
General Installation Information

- All work must be performed by a qualified pool professional, and must conform to all national, state, and local codes.
- Install to provide drainage of compartment for electrical components.

**General Warnings**

- Never open the inside of the drive motor enclosure. There is a capacitor bank that holds a 230 VAC charge even when there is no power to the unit.
- The IntelliPro VS-3050 pump is not submersible
- The IntelliPro VS-3050 pump is capable of 174 GPM or 104 feet of head; use caution when installing and programming to limit pumps performance potential with old or questionable equipment
- Code requirements for the electrical connection differ from state to state. Install equipment in accordance with the National Electrical Code and all applicable local codes and ordinances.
- Always Press the Stop button and disconnect the communication cable before performing maintenance, and always power the unit off by disconnecting the main circuit to the pump.

Two Speed Pump Controls Notice (Title 20 Compliance)

Please read the following important Safety Instructions. When using two-speed pumps manufactured on or after January 1, 2008, the pump’s default circulation speed MUST be set to the LOWEST SPEED, with a high speed override capability being for a temporary period not to exceed one normal cycle, or two hours, whichever is less.
IntelliFlo® VS-3050 Variable Speed Pump

The IntelliFlo VS-3050 variable speed pump is well suited for all of your pool, spa, cleaner, waterfall and other water application. Using the control panel, IntelliFlo can use one of the four selectable preset speeds or the pump speed can be adjusted to run at a specific speed. IntelliFlo outperforms all conventional pumps in its class. Advanced energy conservation features ensure that your filtration system is operating at peak efficiency.

IntelliFlo VS-3050 models

The IntelliFlo VS-3050 operates at a maximum system flow of 160 gallons per minute (GPM)

The IntelliFlo VS-3050 can operate from 400 RPM to 3450 RPM with preset speeds of 750, 1500, 2350, and 3110 RPM. The pump can be adjusted from the control panel to run at any speed between 400 RPM to 3450 RPM for different applications. The IntelliFlo pump control panel alarm LED warns the user against under and over voltage, high temperature, over current and freeze protection. See page 29 for the LED alarm and warning sequence codes.

External Control

The IntelliFlo VS-3050 can communicate with an EasyTouch, IntelliTouch or SunTouch control system or the IntelliComm communication center via a two-wire RS-485 connection for remote speed control. The RS-485 communication cable is included with each pump. The EasyTouch and IntelliComm provide the ability to remotely control the IntelliFlo with four preset speeds. The IntelliTouch can be configured to use eight speeds with the IntelliFlo VS-3050.
Features

- Adjusts to various pool sizes
- Prevents thermal overload
- Detects and prevents damage from under and over voltage conditions
- Protects against freezing
- Communicates with a Pentair EasyTouch, IntelliTouch or SunTouch control system or IntelliComm communication center via a two-wire cable connection
- Easy to use operator control panel
- Operator control panel buttons for speed control
- Built-in strainer pot and volute
- Ultra energy-efficient TEFC Square Flange Motor
- Compatibility with most cleaning systems, filters, and jet action spas
- Motor assembly features permanent magnet synchronous motor
- Heavy-duty, durable construction designed for long life
- UL, CSA and NSF approval

IntelliFlo VS-3050 Motor Assembly

The IntelliFlo three-phase six-pole motor operates at 3450 RPM (at 92% efficiency) and 1000 RPM (at 90%). The drive assembly is continually cooled by an external fan. Dual seals on the motor shaft and at the fan assembly seal the entire motor from any moisture from entering the motor assembly. For added protection, a slinger located in front of the main shaft seal assists in slinging water away from the shaft opening in the flange.
IntelliFlo VS-3050 Drive Assembly and Control Panel

The IntelliFlo drive assembly consists of an operator control panel and the system electronics that drive the motor. The drive microprocessor controls the motor by changing the frequency of the current it receives together with changing the voltage to control the rotational speed.

IntelliFlo VS-3050 Motor Features

- Permanent Magnet Synchronous Motor (PMSM)
- High efficiency (3450© RPM 92% and 1000 RPM 90%)
- Superior speed control
- Operates at lower temperatures due to high efficiency
- Same technology as deployed in hybrid electric vehicles
- Designed to withstand outdoor environment
- Totally enclosed fan cooled
- Three-phase motor
- 56 Square Flange
- Six-Pole
- Low noise
Controls and LEDs

1. **Speed 1, Speed 2, Speed 3, and Speed 4 button/LED:** Press one of the speed buttons to select the desired preset pump speed. The pump preset speeds are: **Speed 1 (750 RPM), Speed 2 (1500 RPM), Speed 3 (2350 RPM), and Speed 4 (3110 RPM).** The speed button LED is on when the selected button is pressed. If the pump is running and the Up/Down button is used to adjust the speed, the selected speed LEDs will go off. For more about using the speed buttons, see page 5.

2. **Up/Down button:** While the pump is running, press the Up or Down button to increase or decrease the pump speed. To save the new pump speed, press any one of the four speed buttons for three seconds to assign the speed to the selected button (the LED be on). Four adjusted pump speeds can be assigned to the speed buttons. When the pump is using an adjusted speed and the pump is powered down, the next time the pump is powered up the pump will use the same speed. For more about using the Up/Down button, see page 5.

3. **Start button/LED:** Starts the pump using a selected or adjusted speed. This LED is on when the pump is running.

4. **Stop button:** Press this button to stop the pump.

5. **On LED:** This green power LED is on when IntelliFlo is powered up.

6. **Alarm LED:** This LED is on when an error condition occurs. This green LED will flash a certain number of times indicating a specific error condition. For the alarm LED flash sequence, refer to “Alarm and Warning LED Sequence,” on page 29.
Section 2

Operating IntelliFlo VS-3050

This section describes how to use the IntelliFlo VS-3050 pump control panel.

Setting the pump preset speed

IntelliFlo operates using one of the preset speeds. Use the speed buttons to select the preset speeds.

To set the pump speed

1. Ensure that the pump is powered on and the green power LED is on.
2. Press the desired speed button (1-4) for less than three seconds to select the preset pump speed. When the selected speed button is pressed, the LED is on. The pump preset buttons and speeds are:
   - Speed 1 button - 750 RPM
   - Speed 2 button - 1500 RPM
   - Speed 3 button - 2350 RPM
   - Speed 4 button - 3110 RPM
3. Press the Start button to start the pump using the selected speed if necessary.

Adjusting the pump speed

IntelliFlo can be adjusted to run at any speed between 400 RPM and 3450 RPM.

To adjust the pump speed

1. Ensure that the pump is powered on and the green power LED is on.
2. Press the Start button to start the pump if the pump is not running.
3. Press the Up/Down button to increase or decrease the pump speed.
   - 10 RPM increments: Press and quickly release the Up/Down button to increase or decrease the speed in 10 RPM increments.
   - 20 RPM increments: Press and hold the Up/Down button to continuously increase or decrease the pump speed.
4. Saving an adjusted speed: To save the newly adjusted pump speed, press and hold the desired speed buttons to assign the current speed. Four new pump speeds can be assigned to Speed buttons (1-4).
5. Press the Speed button that is assigned to the adjusted speed.
Starting the pump

To start the pump

1. Ensure that the pump is powered on and the green power LED is on.
2. Press the Start button (LED on) to start the pump.

*Note:* When the pump is using a modified speed and is powered down, the next time the pump is powered up, the pump will use that same speed.

Stopping the pump

To stop the pump

- Press the Stop button to stop the pump.

*Note:* The pump can automatically restart if the communication cable is connected.

Resetting the pump to factory defaults

The IntelliFlo VS-3050 pump can be reset to the factory default settings. All previously adjusted pump speeds that were saved will be erased.

To reset the pump to the factory default settings:

1. Ensure that the pump is powered on and the green power LED is on.
2. Press the Stop button to stop the pump.
3. Press and hold all of the four Speed buttons simultaneously for four seconds. Power off the drive and reenergize. The default settings will be in effect.

Assigning a pump address for remote control

The default communications address for the IntelliFlo is 1. This is the only IntelliFlo address that the EasyTouch and IntelliComm systems will communicate with. Therefore these devices can only communicate with one IntelliFlo. The IntelliTouch is able to communicate with four IntelliFlo pumps. If more than one IntelliFlo is being used with an IntelliTouch the 2nd, 3rd and 4th pumps will have to be readdressed as described below.

To assign a pump an address:

1. Be sure that the pump is powered on and the green power LED is on.
2. Press the Stop buttons to stop the pump.
3. Press and hold both the Start and Stop buttons until the red LED will start flashing, then press one of the four speed buttons to select which address to assign the pump.
4. Press and hold both the Start and Stop buttons to save the address. Repeat the process for the other pumps.
IntelliFlo VS-3050 Installation and User’s Guide

**Priming the pump for the first time, or after service**

Before the IntelliFlo VS-3050 pump is started for the first time it must be primed. To prime a pump means filling the pump and suction pipe with water. This process evacuates the air from all the suction lines and the pump. It may take several minutes to prime depending on the depth of water, pipe size and length. It is easier to prime a pump if you allow all the air to escape from the pump and pipes. The water cannot enter unless the air can escape. Pumps do not hold prime, the pool piping system has that task.

**CAUTION -** To avoid permanent damage to the IntelliFlo pump, before starting the pump, fill the IntelliFlo housing strainer with water so that the pump will prime correctly. If there is no water in the stainer the pump will not prime.

- NEVER run the pump dry! Running the pump dry may damage the seals, causing leakage and flooding!
- Do not add chemicals to the system directly in front of pump suction. Adding undiluted chemicals may damage the pump and will void the warranty.
- Open gate valves before starting system.
- Pump will prime itself when used in flooded suction system.
- Be sure to release all air from filter and piping system.
- The IntelliFlo pump is a variable speed pump. Typically the lower speeds are used for filtration and heating. The higher speeds can be used for spa jets, water features, and priming.

**CAUTION -** Before starting this procedure, first read the following

**Before removing the pump lid:**

1. **Press the Stop button** if the pump is running before proceeding.
2. **Disconnect the communication cable from the pump.**
3. **Disconnect main power supply**
4. **Close the gate valves** in suction and discharge pipes.
5. **Release all pressure** from pump and piping system.
6. **Never tighten or loosen** the clamp while the pump is operating.

**WARNING!** If the pump is being pressure tested, release all pressure before removing the trap cover. Do not block the pump suction while the pump is running. If a body part blocks the pump suction it may cause severe or fatal injury. Small children using the pool must ALWAYS have close adult supervision.

**WARNING! FIRE and BURN HAZARD** - The pump motor may run at a high temperatures. To reduce the risk of fire, do not allow leaves, debris, or foreign matter to collect around the pump motor. To avoid burns when handling the motor, shut off the motor and allow it to cool for 20 minutes before trying to work on it. The IntelliFlo provides an automatic internal cutoff switch to protect the motor from heat damage during operation.
Priming the pump for the first time, or after service (Continued)

Priming the Pump

- Release all pressure from filter, pump, and piping system; see the filter owner’s manual.
- In a flooded suction system (water source higher than pump), the IntelliFlo VS-3050 pump will prime itself when suction and discharge valves are opened.
- If the IntelliFlo pump is not in a flooded suction system, unscrew and remove lid cover; fill the and pump with water.
- Do not lubricate the trap cover o-ring. The original equipment o-ring contains a permanent internal lubricant.

**NOTICE:** If you replace the o-ring with a non-internally lubricated o-ring, you may need to apply a silicone based lubricant.

- Clean and inspect o-ring; reinstall on trap cover.
- Replace trap cover on trap; turn clockwise to tighten cover.

**NOTICE:** Tighten the pump lid by hand only (no wrenches)!

Pump should prime now. Priming time will depend on vertical length of suction lift and horizontal length of suction piping. If pump does not prime, make sure that all valves are open, suction pipe end is under water, pump suction is below water level, and that there are no leaks in suction pipe.

To prime the IntelliFlo pump:

1. Turn the pump clamp and lid in a counterclockwise direction until it stops and remove them.
2. Fill the pump strainer pot with water.
3. Reinstall the pump clamp and lid onto the strainer pot. The pump is now ready to prime.
4. Make sure all electrical connections are clean and tight.
5. Open the air release valve on the filter, and stand clear of the filter.
6. Switch the IntelliFlo pump on at the circuit breaker. Ensure that the green power light is on.
7. Press the **Speed 1** button to select the pump speed of 750 RPM.
8. Press the **Start** button to start the pump. Use the **Up/Down** button to increase the speed as necessary to prime the pump.
9. When water comes out of the air release valve, close the valve. The system should now be circulating water back to the pool without air bubbles showing in either the hair and lint pot or at the pool return fittings.
10. Use the **Up/Down** button to adjust the operating speed as desired.
External Control with IntelliComm Communication Center

The IntelliFlo VS-3050 can be remotely controlled by the Pentair IntelliComm Communication Center using an optional communications cable (P/N 350122). The IntelliComm provides four pairs of input terminal connections. These inputs are actuated by either 15 - 240 VAC or 15 - 100 VDC. Using the device's inputs, the programmed IntelliFlo pump speeds can be controlled.

If more than one input is active the highest number will be communicated to the IntelliFlo pump. The IntelliComm will always communicate to pump address 1.

The following table shows the wiring terminal descriptions for IntelliComm.

**External Control**

<table>

Connecting IntelliFlo VS-3050 to an EasyTouch System

The IntelliFlo can be controlled by an EasyTouch system via the RS-485 communication cable (P/N 350122). In this configuration, EasyTouch starts, stops and controls the speed of the IntelliFlo pump. When the EasyTouch does this, it rewrites the IntelliFlo memory, which can take several seconds. This causes a delay after a command is given on the EasyTouch control panel until the IntelliFlo physically responds.

The IntelliFlo control panel is disabled when communicating with the EasyTouch system. Note that IntelliTouch will not start communicating with the IntelliFlo until the pump is assigned to a circuit. The IntelliFlo default pump address is one which is the only address that works with EasyTouch. See page 6 for details about how to check the address and change if necessary. For more information, refer to the EasyTouch User's Guide (P/N 520584).

To connect the IntelliFlo communication cable to EasyTouch load center:

1. **CAUTION - Switch the main power off to the EasyTouch load center.**
2. Unlatch the two enclosure door spring latches, and open the door.
3. Remove the two retaining screws securing the high voltage cover panel, and remove it from the enclosure.
4. Loosen the two access screws securing the control panel.
5. Lower down the hinged control panel to access the EasyTouch motherboard.

6. Route the communication cable into the lower plastic grommet, up through the low voltage raceway to the EasyTouch load center motherboard.

7. Strip back the cable conductors ¼ inch. Insert the two wires into the screw terminals on the board. Secure the wires with the screws.

8. **EasyTouch to IntelliFlo pin configuration:**
   - IntelliFlo: Connect pin 6 (green) to EasyTouch screw terminal pin 2 (green)
   - IntelliFlo: Connect pin 7 (yellow) to EasyTouch screw terminal pin 3 (yellow)

9. Insert the screw terminal onto the EasyTouch **COMPORT (J20)** board connector. **Note:** Multiple wires may be inserted into a single screw terminal.
10. Close the control panel into its original position and secure it with the two access screws.
11. Install the high voltage cover panel and secure it with the two retaining screws.
12. Close the EasyTouch load center front door. Fasten the two spring latches.
13. Switch the power on to the EasyTouch load center.
Connecting IntelliFlo VS-3050 to an IntelliTouch System

The IntelliFlo VS-3050 can be controlled by an IntelliTouch system via the RS-485 communication cable (P/N 350122). In this configuration, IntelliTouch starts, stops and controls the speed of the IntelliFlo pump. When the IntelliTouch does this, it rewrites the IntelliFlo memory, which can take several seconds. This causes a delay after a command is given on the IntelliTouch control panel until the IntelliFlo physically responds.

The IntelliFlo control panel is disabled when communicating with the IntelliTouch system. Note that IntelliTouch will not start communicating with the IntelliFlo until the appropriate pump address is assigned to a circuit. The IntelliFlo default pump address is one. See page 6 for details about how to check the address and change if necessary. For more information, refer to the IntelliTouch User's Guide (P/N 520102).

To connect the IntelliFlo communication cable to IntelliTouch load center:

1. **CAUTION - Switch the main power off to the IntelliTouch load center.**
2. Unlatch the IntelliTouch load center front door spring latches, and open the front door.
3. Remove the cover-panel screws securing the high voltage cover-panel, and remove it from the enclosure.
4. Loosen the two control panel access screws and fold down the outdoor control panel.
5. Insert the two-wire cable into plastic grommet on the bottom of the enclosure and route the wire up through the low voltage raceway to the Personality board.
6. Strip back the cable conductors ¼”. Insert the wires into the either of the COM PORTS (J7 and J8) screw terminals located on the left side of the Personality board. Secure the wires with the screws. For wiring details, refer to “Pin Configuration” shown below. Note: Multiple wires may be inserted into a single screw terminal. Strip back the cable conductors ¼ inch. Insert the two wires into the screw terminals on the board. Secure the wires with the screws.

7. Close the control panel into its original position and secure it with the two access screws.

8. Install the high voltage cover panel and secure it with the two retaining screws.

9. Close the load center front door. Fasten the two spring latches.

10. Switch the power on to the load center.

Pin Configuration IntelliFlo to IntelliTouch pin configuration:
- IntelliFlo: Connect pin 6 (green) to IntelliTouch screw terminal pin 2 (green)
- IntelliFlo: Connect pin 7 (yellow) to IntelliTouch screw terminal pin 3 (yellow)

IntelliTouch Personality board COM PORT (J7/J8)
Connecting IntelliFlo VS-3050 to a SunTouch System

The IntelliFlo VS-3050 can be controlled by a SunTouch system via the RS-485 communication cable (P/N 350122). To connect the two wire RS-485 cable from the IntelliFlo VS-3050 drive assembly to the motherboard located in the SunTouch Power Center:

**WARNING** - Switch OFF main system power to the SunTouch Power Center before making any connections.

To access the SunTouch Power Center electronics compartment:

1. Unlatch the front door of the SunTouch Power Center, and open the door.
2. Loosen the retaining screw on front panel. Open the hinged front panel to access the electronics compartment.
3. Route the two conductor cable up through the Power Center grommet opening located on the left side, and up through the low voltage raceway to the motherboard.
4. Strip back the cable conductors ¼ in. Insert the wires into the screw terminals (provided in the kit). Secure the wires with the screws. Make sure to match the color coding of the wires; Yellow = +DT, Green = -DT.
5. Insert the connector on the **COMPORT (J11)** screw terminal on the motherboard.
6. When the connection is completed, close the control panel and secure it with the retaining screw.
7. Close the front door. Fasten the spring latch.
The following information describes how to service and maintain the IntelliFlo VS-3050 pump.

**Pump Strainer Basket**

The strainer, sometimes referred to as the “Hair and Lint Pot,” is in front of the of the pump. Inside there is a basket which must be kept clean of leaves and debris at all times. View the basket through the top see through lid to inspect for leaves and debris.

Regardless of the length of time between filter cleaning, it is most important to visually inspect the hair and lint pot basket at least once a week. A dirty basket will reduce the efficiency of the filter and possibly the heater.

⚠️ **WARNING — DO NOT** open the strainer pot if pump fails to prime or if pump has been operating without water in the strainer pot. Pumps operated in these circumstances may experience a build up of vapor pressure and may contain scalding hot water. Opening the pump may cause serious personal injury. In order to avoid the possibility of personal injury, make sure the suction and discharge valves are open and that the strainer pot is cool to the touch, then open with extreme caution.

⚠️ **CAUTION —** To prevent damage to the pump and filter and for proper operation of the system, clean pump strainer and skimmer baskets regularly.

**Pump Strainer Basket Service**

If the IntelliFlo pump is installed below the water level of the pool, close the return and suction lines before opening the hair and lint pot on the pump.

1. Press the Stop button to stop the pump and switch off the pump at the circuit breaker.
2. Disconnect the communication cable from the IntelliFlo pump.
3. Relieve pressure in the system.
4. Turn the clamp and lid in a counterclockwise direction until it stops.
5. Remove the clamp and lid.
6. Remove the basket and put the debris into the trash and rinse out the basket. If the basket is cracked, replace the basket.
7. Replace the basket and fill the pump pot and volute with water up to the inlet port.
8. Clean the cover, o-ring, and sealing surface of the pump pot. Grease the o-ring with Teflon or silicone lubricant.
9. Reinstall the lid by placing the clamp and the lid on the pot.
Motor Service

1. **Protect from heat:**
   - Shade the motor and controller from the sun.
   - Any enclosure must be well ventilated to prevent overheating. Particular attention should be paid to the motor fan cover and the cooling fins between the drive and the motor.
   - Provide ample cross ventilation.

2. **Protect against dirt:**
   - Protect from any foreign matter or splashing water.
   - Do not store (or spill) pool chemicals near the motor.
   - Avoid sweeping or stirring up dust near the motor while it is operating.
   - If a motor has been damaged by dirt it voids the motor warranty.

3. **Protect against moisture:**
   - Protect from splashing pool water.
   - Protect from the weather.
   - Protect from lawn sprinklers.
   - If a motor has become wet - let it dry before operating. Do not allow the pump to operate if it has been flooded.
   - If a motor has been damaged by water it voids the motor warranty.

*Note: DO NOT wrap motor and controller with plastic or other air tight materials. The motor and controller may be covered, but not wrapped in plastic, during a storm, for winter storage, etc., but never when operating, or expecting operation.*

When replacing the motor, be certain that the motor support is correctly positioned to support the size of motor being installed.

---

**Motor Service (Continued)**

10. Ensure that the lid o-ring is properly placed. Seat the clamp and lid then turn clockwise until the handles are horizontal as shown.

11. Reconnect the communication cable to the pump if required.

12. Switch the power ON at the circuit breaker. Reset the pool time clock to the correct time.

**WARNING — FILTER OPERATES UNDER HIGH PRESSURE. WHEN ANY PART OF THE CIRCULATING SYSTEM (e.g., LOCK RING, PUMP, FILTER, VALVES, ETC.) IS SERVICED, AIR CAN ENTER THE SYSTEM AND BECOME PRESSURIZED. PRESSURIZED AIR CAN CAUSE THE LID TO BLOW OFF WHICH CAN RESULT IN SEVERE INJURY, DEATH, OR PROPERTY DAMAGE. TO AVOID THIS POTENTIAL HAZARD, FOLLOW THESE INSTRUCTIONS.**

13. Open the manual air relief valve on top of the filter.
14. Stand clear of the filter. Press the Start button on the pump.
15. Bleed air from the filter until a steady stream of water comes out.
Winterizing

To protect the IntelliFlo pump electronics from damage due to freezing conditions, the pump will switch itself on to generate internal heat when the air temperature drops below 40° F. This feature is not intended to protect the system plumbing from freezing.

1. If the air temperature drops below 40° F the water in the pump can freeze and cause damage. Freeze damage is not warrantable.

2. To prevent freeze damage follow the procedures listed below.
   - Shut off electrical power for the pump at the circuit breaker.
   - Drain the water out of the pump by removing the two thumb-twist drain plugs located at the bottom of the volute. Store the plugs in the pump basket.
   - Cover the motor to protect it from severe rain, snow and ice.
   - Do not wrap the motor in plastic. It will cause condensation and rust on the inside of the motor.

Note: In mild climate areas, when temporary freezing conditions may occur, run your filtering equipment all night to prevent freezing.

Priming the pump after service

Before a system start-up, the pump and system must be manually primed. Make sure to reopen valves before operating. To prime IntelliFlo, the strainer pot must be filled with water.

⚠️ CAUTION — DO NOT run the pump dry. If the pump is run dry, the mechanical seal will be damaged and the pump will start leaking. If this occurs, the damaged seal must be replaced. ALWAYS maintain proper water level in your pool. Continued operation in this manner could cause a loss of pressure, resulting in damage to the pump case, impeller and seal.

For instructions about how to prime the IntelliFlo pump, refer to “Priming the pump for the first time or after servicing,” on page 7.
Section 4
Installation and Removal

The following information describes how to install the IntelliFlo VS-3050 pump.

Note: Before installing this product, read and follow all warning notices and instructions on page ii.

IntelliFlo VS-3050 Kit Contents

- IntelliFlo VS-3050 pump

Installing the IntelliFlo

Only a qualified service person should install the IntelliFlo pump.

Location

1. Install the pump as close to the pool or spa as possible. To reduce friction loss and improve efficiency, use short and direct suction and piping returns.

2. Install a minimum of five (5) feet from the inside wall of the pool and spa. Canadian installations require a minimum of three (3) meters from pool water.

3. Install the pump a minimum of two (2) feet from the heater outlet.

4. Do not install the pump more than (8) feet above the water level.

5. Install the pump in a sheltered well ventilated location protected from excessive moisture, (i.e., rain, sprinklers, etc.).

6. For hot tubs and spas, do not install within an outer enclosure or beneath the skirt of a hot tub or spa.

7. Install the pump with a rear clearance of at least 6 inches so that the motor can be removed easily for maintenance and repair.

Piping

For improved pool plumbing, it is recommended to use a larger pipe size. When installing the inlet and outlet fittings (male adaptors), use thread sealant. Do NOT use Teflon® tape.

Do not install 90° elbows directly into pump inlet or outlet. A valve, elbow or tee installed in the suction line should be no closer to the front of the pump than five (5) times the suction line pipe diameter (i.e., two (2) inch pipe requires a ten (10) inch straight run in front of the suction inlet of the pump). This will help the pump prime faster and last longer.

Flooded suction systems should have gate valves installed on suction and discharge pipes for maintenance, however, the suction gate valve should be no closer than five (5) times the suction pipe diameter as described above.

Check Valve

Check valves must be used when the IntelliFlo is used in parallel with other pumps. IntelliFlo pumps cannot be used in series with other pumps.
Wiring the IntelliFlo VS-3050

To connect the pump to an AC power source:

1. Make sure all electrical breakers and switches are turned off before wiring motor.
2. Make sure that the wiring voltage is 230 VAC ± 10%.
3. Use #12 AWG for wire runs up to 100 feet and #10 AWG for lengths longer than 100 feet. When in doubt use a heavier gauge (larger diameter) wire. Heavier gauge will allow the motor to run cooler and more efficient.
4. Make sure all electrical connections are clean and tight.
5. Cut the wires to the appropriate length so they do not overlap or touch when connected.
6. Permanently ground the motor using the green ground wire, as shown below. Use the correct wire size and type specified by National Electrical Code. Make sure the ground wire is connected to an electrical service ground.
7. Bond the motor to the pool structure in accordance with the National Electrical Code. Use a solid No. 8 AWG or larger copper conductor (No. 6 or larger in Canada). Run a wire from the external bonding lug to the pool bonding structure, as shown below.
8. The pump should be permanently connected to either a circuit breaker, 2-pole timer or 2-pole relay. If AC power is supplied by a GFCI circuit breaker, use a dedicated circuit breaker that has no other electrical loads.
9. IMPORTANT: When connecting the pump to an automation system (IntelliTouch, EasyTouch, SunTouch and IntelliComm), continuous power must be supplied to the pump by connecting it directly to the circuit breaker. When using an automation system, Be sure that no other lights or appliances are on the same circuit.

**NOTE:** When the pump is started and stopped by removing power with a relay or timer, a two-pole device should be used to apply and remove power to both POWER LINE TERMINALS.

---

Initial SVRS Setup and Operational Check

The following initial SVRS setup steps describe how to determine the maximum intended flow (GPM) and pump speed (RPM) for the system, and to perform a simulated entrapment event.

1. The SVRS system should be initially setup for operation at maximum flow (see page 5).
2. If the system includes a filter, the filter must be in a clean condition prior to setting up the maximum flow condition.
3. Remove the drain plug from the pump strainer housing and install the vacuum gage into the 1/4” NPT housing opening.
Pump Disassembly

**WARNING** — Always disconnect power to the pool pump at the circuit breaker and disconnect the communication cable before servicing the pump. Failure to do so could result in death or serious injury to serviceman, pool users or others due to electric shock. Read all servicing instructions before working on the pump.

**WARNING** — **DO NOT** open the strainer pot if pump fails to prime or if pump has been operating without water in the strainer pot. Pumps operated in these circumstances may experience a build up of vapor pressure and may contain scalding hot water. Opening the pump may cause serious personal injury. In order to avoid the possibility of personal injury, make sure the suction and discharge valves are open and strainer pot temperature is cool to touch, then open with extreme caution.

**CAUTION** — Be sure not to scratch or mar the polished shaft seal faces; seal will leak if faces are damaged.

All moving parts are located in the rear subassembly of the IntelliFlo pump.

Tools required:

- 3/32 inch Allen head wrench.
- ½ inch open end wrench.
- 9/16 inch open end wrench.
- Flat blade screwdriver.

To remove and repair the pump mechanical seal, perform the following procedures:

1. Switch off the pump circuit breaker at the main panel.
2. Disconnect the RS-485 communication cable from the pump.
3. Drain the pump by removing the drain plugs.
4. Remove the six bolts that hold the main pump body (strainer pot/volute) to the rear subassembly.
5. GENTLY pull the two pump halves apart, removing the rear subassembly.
6. Use a 3/32 inch Allen head wrench to loosen the two holding screws located on the diffuser.
7. Hold the impeller securely in place and remove the impeller lock screw by using a Phillips head screwdriver. The screw is a left-handed thread and loosens in a clockwise direction.
8. Use a flat blade screwdriver to hold the motor shaft. The motor shaft has a slot on the end which is accessible through the center of the fan cover.
Pump Disassembly (Continued)

9. To unscrew the impeller from the shaft, twist the impeller counterclockwise.

10. Remove the rotating portion of the mechanical seal from the impeller.

11. Remove the four bolts from the seal plate to the motor, using a 9/16 inch wrench.

12. Place the seal plate face down on a flat surface and tap out the carbon spring seat.

13. Clean the seal plate, seal housing, and the motor shaft.

Pump Reassembly/Seal Replacement

1. When installing the replacement shaft seal, use silicone sealant on the metal portion before pressing into the seal plate as shown.

2. Before installing the rotating portion of the seal into the impeller, be sure the impeller is clean. Use a light density soap and water to lubricate the inside of the seal. Press the seal into the impeller with your thumbs and wipe off the ceramic and carbon faces with a clean cloth.

3. Remount the seal plate to the motor.

4. Grease the motor shaft thread and screw impeller onto the motor shaft.

5. Screw in the impeller lock screw (counterclockwise to tighten).

6. Remount the diffuser onto the seal plate. Make sure the plastic pins and holding screw inserts are aligned.

7. Grease the diffuser o-ring and seal plate gasket prior to reassembly.

8. Grease the bolt threads, assemble the motor subassembly to the strainer pot-pump body by using the two (2) through bolts for proper alignment. Do not tighten the through bolts until all six (6) bolts are in place and finger tightened.

9. Reconnect the RS-485 communication cable to the pump.

10. Fill the pump with water.

11. Reinstall the pump lid and plastic clamp. See “Pump Strainer Basket Service” on page 15 for details.

12. Prime the pump, see page 7.

Shaft Seal Replacement

The Shaft Seal consists primarily of two parts, a rotating member and a ceramic seal. The pump requires little or no service other than reasonable care, however, a shaft seal may occasionally become damaged and must be replaced.

Note: The polished and lapped faces of the seal could be damaged if not handled with care.
Drive Assembly Removal and Installation

To remove the IntelliFlo VS-3050 drive and control panel from the motor assembly:

1. Make sure all electrical breakers and switches are turned off before removing the drive.
2. Disconnect the RS-485 communication cable from the pump.
3. Open the control panel cover.
4. Remove the three Phillips head screws securing the drive to the motor assembly as shown.

**CAUTION: TO AVOID ELECTRICAL HAZARD, DO NOT REMOVE THE FOUR TAMPER PROOF BITS FROM THE MOTOR ASSEMBLY**

5. Lift up the drive assembly and remove it from the motor adapter located on top of the motor assembly.

*Note: Be careful not to remove the gasket between the drive and motor, it is critical in keeping moisture out of the drive and motor. Replace the gasket if damaged. Do not reassemble with a damaged or missing gasket.*

To install the IntelliFlo drive assembly onto the motor assembly:

1. Make sure all electrical breakers and switches are turned off before installing the drive.
2. Be sure that the gasket between the drive and motor is in place. It is critical in keeping moisture out of the drive and motor. Replace the gasket if damaged. Do not reassemble with a damaged or missing gasket.
3. Verify that the three (3) orange motor post caps are in position before placing the drive on the motor assembly.
4. Align the drive assembly with the motor adapter and seat the drive on the motor assembly.
5. Secure and tighten the drive assembly with the three Phillips head screws.

IntelliFlo VS-3050 Electrical Specifications

**Circuit Protection:** Two-pole 20 AMP device at the Electrical Panel.

Input: 230 VAC, 50/60 Hz, 3200 Watts
Warning and Alarm conditions

The IntelliFlo VS-3050 alarms and warnings are indicated by flashing LEDs on the control panel. For example, if a “Drive Temperature” warning occurs, the LED will blink two times, then Off, then blink two times. This sequence is repeated until the condition is cleared.

- **Warning condition:** If a warning condition occurs the pump will be continue to run but at a reduced speed. The Green LED executes a sequence of blinks to indicate which alarm or warning has occurred.

- **Alarm condition:** If an alarm condition occurs the pump will drive stop running. The red LED flashes continuously to indicate the presence of an alarm. The alarm LEDs will reset when the condition clears.
