

AquaPC On Point™

Chemical Controller

By Pentair Water Pool and Spa®

The ultimate in hands-free pool chemical management

The cleanest, safest, and most enjoyable swim experience comes from a pool with just the right chemical balance – the kind where you never notice the chemicals at all. Even better is a chemical management system that achieves this complex balancing act automatically – with no demands on you.

That's why AquaPC On Point™ is considered the perfect system. It continuously monitors pH and sanitizer levels and automatically adds the right chemicals, as needed, to maintain perfectly balanced water chemistry.

The key words are “continuous” and “automatic”. The system prevents the ups and downs of chemical concentration that can lead to, at best, less-than-perfect conditions and, at worst, time-consuming and costly problems.

- Eliminate the time and guesswork that leads to more time and guesswork as bather loads change and different airborne contaminants invade your pool from season to season.
- Eliminate the eye and skin irritation and odor caused by out-of-balance water conditions.

- Protect your pool equipment from corrosion caused when pH is allowed to swing in and out of balance.
- Minimize chemical costs by adding chemicals with precision and only when needed, to eliminate waste.
- Make sanitizer more effective (maintain maximum amount of sanitizer in active germ-killing form) by eliminating fluctuations in pH level.

Conclusion? The best way to maintain safe, clear, irritation-free pool water is with AquaPC On Point. It's the easiest, automatic way to perfect pool water.

AquaPC On Point is pre-mounted on a 1' x 2' backboard for easy installation

AquaPC On Point™ Chemical Controller

Seven LED indicator lights give you easy system status monitoring

Two digital displays can be easily read from a distance of over twenty feet and are visible at night

Alarms alert you when pH and ORP are too high or low

One-touch push-button programming and adjustment

Proven commercial automation technology comes to residential pools

AquaPC On Point is an automated water chemistry management system that uses the same technology found in more demanding commercial applications, water parks, hospitality pools, institutional pools, and more. You can be sure your On Point system includes the most sophisticated, reliable, durable and proven technologies available for greatest total value in a chemical control system.

Additional features:

- Compatible with liquid feed pumps, erosion type chemical feeders and salt chlorine generators.
- Programmable chemical feed cycle on and off times for precise water balance.
- Password-protected access prevents tampering or accidental program changes.

- Flow sensor ensures chemicals won't feed without system flow, guarding against false readings and equipment damage.
- Assures safe water conditions by preventing excess chemical addition within a 24 hour period.
- Add the optional Stor-Pro™ chemical storage system for safe and secure chemical containment.
- One-year limited warranty on electronics, sensors, and flow cell. See warranty for details.
